1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baur et al (6441937).

Baur et al teach a transceiver which detect a signal (6) received over a fiber (4) which includes a reflected signal, maintaining information that corresponds to a transmitted signal (column 4, lines 51-57, characteristic parameters and column 6, lines 47-52; claim 5 stores characteristic parameters), compensating a first portion of the reflected signal (column 4, lines 60-65). Although he does not specifically teach that he is cancelling the reflected signal, it would have been obvious to subtract (or cancel) the reflected signal which would have been added in the reflection as a method of compensating for the reflection. He teaches that he compensates for near end reflections (coupler reflections) and far end reflections (column 4, lines 65-column 5, 7).

3. Claims 7-24 are allowed.

4. Claims 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is an examiner's statement of reasons for allowance: the closest prior art of record (Palmer or Baur et al), teach canceling reflection signals. It would not

have been obvious to modify these references to include error correction coding, adjusting the threshold detection level based on the average bias of the second portion of the signal in order to provide the reflection compensation.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Palmer teaches reflection compensation (column 2, lines 55-62).
